

Aneesh Sharma

+91 7206734591 | aneeshsharma1024@gmail.com | linkedin.com/in/helloaneesh | github.com/aneeshsharma72067

Full-stack engineer with 1+ year building production systems — distributed backends, event-driven pipelines, and AI-integrated tooling.

EDUCATION

Chhattisgarh Swami Vivekananda Technical University

B.Tech in Computer Science Engineering | CGPA: 8.1/10

Bhilai, Chhattisgarh

Nov. 2021 – July 2025

EXPERIENCE

ResilienceSoft

Junior Software Developer

Feb. 2025 – Present

- Diagnosed and resolved **N+1 query problems** and application-layer filtering bottlenecks by rewriting logic as optimized SQL queries, reducing API response times from **10+ seconds to under 1 second**.
- Refactored a **React Native app serving 10k+ users** with degraded performance — replaced FlatList with FlashList, implemented pagination and **background data fetching**, and migrated critical sections to native modules, restoring smooth scrolling and fast load times.
- Built an **internal CLI tool** automating project scaffolding and folder structure generation, reducing new project setup time from **4–8 hours to under 1 hour** across the team.
- Designed **FHIR-compliant backend schemas** for a healthcare platform, enabling interoperable storage and querying of patient records across services.
- Integrated **AI agents and MCP servers** into dev workflows, automating PR summaries and test scaffolding — cutting average feature turnaround by ~2 days per sprint.
- Implemented **cron jobs, background workers, and automated email workflows** for scheduled operations, eliminating manual intervention on recurring tasks.

PROJECTS

Reposage – AI Workflow Analyzer | *Fastify, Next.js, Redis, BullMQ, Postgres, Azure* | [GitHub](#)

Jan 2026 – Mar 2026

- Built an **event-driven AI pipeline** that ingests GitHub webhook events, runs **LLM-based analysis** to detect risks like large commits, dependency bloat, and architectural drift, and surfaces results on a real-time **Next.js dashboard**.
- Developed a **serverless Fastify API** on Vercel that processes webhook payloads in **under 100ms** and enqueues jobs to **Redis (Upstash)** via **BullMQ** for async processing.
- Deployed **distributed AI workers** on **Azure Container Apps** with **Postgres + Prisma** for persisting analysis runs, enabling historical trend tracking per repository.

Repeto.dev | *Hono, React, Supabase, Resend, Cloudflare Workers, Vercel* | [repeto.dev](#)

Mar 2026

- Built and launched a **production SaaS tool** that delivers LeetCode's Problem of the Day to users at their chosen time via email, with zero friction signup.
- Architected on **Cloudflare Workers** for globally distributed, low-latency scheduling and **Supabase** for user and preference storage.
- Acquired **20 users within 24 hours of launch**; actively growing with zero paid acquisition.

CloudNoise | *React, Leaflet.js, NestJS, MongoDB, Google Sign-In* | [GitHub](#)

Jun 2025 – Oct 2025

- Built a **noise monitoring platform** with interactive map dashboards and **heatmap visualizations** using Leaflet.js and OpenStreetMap for regional environmental analytics.
- Architected backend with **NestJS and MongoDB**; implemented **Google OAuth**, Excel data ingestion pipelines, and geospatial aggregation queries.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python

Frontend: React.js, Next.js, React Native

Backend: Node.js, Fastify, NestJS, Express, Flask, Hono, REST APIs, WebSockets

Databases: PostgreSQL, MySQL, MongoDB, Redis, Prisma

Cloud & DevOps: Docker, Azure Container Apps, AWS EC2, Vercel, Cloudflare, CI/CD, Domain Management

Architecture: Event-driven systems, Async job processing, Microservices, RAG, Security best practices
